DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1, 3 and 4 are rejected under 35 U.S.C. 102(e) as being anticipated by US Patent No. 6,559,014 to Jeon.

Regarding claim 1, Jeon (figure 1) teaches a semiconductor device comprising:

a gate insulating film (110) having a multilayer structure including a zirconium oxide film (110b) and a high dielectric constant film which is formed of an oxide of a metal (110rp) other than zirconium and substantially directly contacting the zirconium oxide film (110b) (column 6, line 28 – column 7, line 4; column 7, lines 37-46; column 7, lines 56-64; column 8, lines 14-17), wherein the high dielectric constant film is a hafnium silicate film (110rp; column 8, lines 14-17).

Regarding claim 3, Jeon teaches the high dielectric constant film contains nitrogen (column 11, lines 38-45).

Regarding claim 4, Jeon teaches the gate insulating film includes a zirconium silicate film (110rp) formed under the zirconium oxide film (110b).

Response to Arguments

Applicant's arguments filed 06/21/04 have been fully considered but they are not persuasive.

It is argued, in page 3 of the remarks, that Jeon does not teach or suggest a high dielectric constant film, which is formed of an oxide of a metal other than zirconium and substantially directly contacting the zirconium oxide film. This argument is not convincing because Jeon teaches a high dielectric constant film which is formed of an oxide of a metal (110rp) other than zirconium and substantially directly contacting the zirconium oxide film (110b) (column 6, line 28 – column 7, line 4; column 7, lines 37-46; column 7, lines 56-64; column 8, lines 14-17), wherein the high dielectric constant film is a hafnium silicate film (110rp; column 8, lines 14-17).

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

Art Unit: 2811

however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
